EXPERIENCE

GIS Consultant - Clarity Partners, Chicago Public Safety Headquarters, IL *Feb 2023 - Present*

- Work alongside the City of Chicago's Public Safety GIS Manager to maintain and improve high-priority GIS datasets that support public safety operations citywide
- Compiled and standardized a 600,000+ record address dataset for the City of Chicago's new Computer-Aided Dispatch (CAD) system, merging multiple address sources, resolving duplicates and inconsistent spellings, adding fields for the fire department's naming convention, and formatting records to meet city geocoding requirements
- Designed the special-events schema, digitized command post locations and event information, performed batch address geocoding, and developed monitoring dashboards to track events, squad car locations, and calls for service, providing public safety personnel with real-time operational visibility during large-scale events
- Built crime-tracking dashboards with KPIs on theft type by district and neighborhood, broken down by week, month, and year
- Automated multi-layout PDF map exports with Python in ArcGIS Notebooks for police district, beat, and fire department map projects, replacing one-at-a-time manual exports and ensuring consistent file names and output folders
- Design, publish, and maintain versioned datasets and feature services through ArcGIS Online and ArcGIS Enterprise Portal, and build web applications in Experience Builder
- Deliver GIS-based PDF maps that incorporate statistical analysis and spatial data to support informed decision-making by city aldermen and public safety personnel
- Write and execute SQL queries in Oracle SQL Developer to create views, maintain tables, and analyze database logs, and use Python and Windows Task Scheduler to automate recurring SQL scripts so they run without manual database connections
- Publish raster and vector feature services to build custom basemaps for internal and public-facing applications
- Use AI tools to speed up scripting, data QA, and technical documentation, working smarter and delivering faster

GIS Specialist - Wyyerd Fiber, Remote *Jul 2022 - Feb 2023*

- Automated construction progress reporting by extracting data from an internal web mapping platform via API, performed SQL-based calculations, and updated GIS services that powered an interactive web application for stakeholders
- Developed and maintained reporting dashboards used by executive leadership to aid in visualizing GIS data
- Administered ArcGIS Online access across the organization, overseeing user accounts, permissions, installations and providing technical support
- Used ArcGIS Pro to analyze daily construction output, broken down by aerial and underground placement, and track counts of Outside Plant (OSP) and Optical Distribution Network (ODN) assets such as splitters, handholes, and manholes
- Gathered requirements from directors and learned the construction workflow before automating it, and tracked construction work orders and permit status

GIS Analyst - Ledcor Technical Services, Elmhurst, IL *Jul 2018 - Jul 2022*

- Served as a GIS subject matter expert for project teams new to GIS, working with project managers and first-time users to identify their needs, build dashboards and web applications for project management and decision-making, and train staff on Field Maps and ArcGIS Online
- Designed project-specific feature class schemas and published them from an Enterprise ArcSDE versioned environment to ArcGIS Online
- Published per-project feature services for the design team and performed attribute QA/QC on submitted designs (handholes, poles, fiber counts, cable sizes, footage), sending issues back to designers for correction
- Built FME workflows to bulk-convert KMZ files while preserving attribute data that Esri conversion tools dropped, and used Python to automate other repetitive tasks for the Ledcor GIS Group
- Led a three-person team post-processing GPS data collected by field crews for an FTTH pre-construction review, cleaning and validating the data and loading it into the client's schema, finishing ahead of schedule
- Merged LiDAR imagery into a single raster dataset to create basemaps
- Designed high-level ODN fiber networks in ArcGIS Pro using Comsof Fiber's auto-design tool

- Used Google Earth Pro to cross-check GIS data and determine OSP placement

GIS Technician - Construction CAD Solutions, Willowbrook, IL *Apr 2017 - Jul 2018*

- Developed seed files and used online GIS data to determine right-of-way and land jurisdiction
- Gathered external GIS data for input and editing in ArcGIS Geodatabases, employing SQL and ArcGIS Toolbox
- Performed wetland and protected-lands reviews as part of geospatial and written environmental evaluations for potential project sites
- Digitized utility placement, land parcels, and roads in ArcMap, and drafted telecom fiber networks in AutoCAD
- Conducted feature extraction and classification from processed LiDAR data
- Collected GPS data points at natural gas utility construction sites using a Topcon GRS-1 and post-processed the survey data in ArcMap

GIS Researcher - Northeastern Illinois University *Aug 2016 - Nov 2016*

- Drove the completion of geographic and demographic research led by university faculty and department head
- Acquired and manipulated census data to join in ArcGIS to calculate total populations for given radii
- Exported data from shapefiles to spreadsheets and created population pyramids
- Presented research findings to executive director of Institutional Research at NEIU

EDUCATION

Bachelor of Arts in Environmental Studies - Northeastern Illinois University, Chicago, IL
Double minor in Geography and Geographic Information Systems | Graduated Cum Laude, 3.60 GPA

SKILLS

Data & Analysis: Oracle SQL, geocoding and address standardization, data conversion, validation and QA, Excel (pivot tables, charts, XLOOKUP), forecasting, buffer analysis
Programming & Automation: Python, ArcPy, FME, ModelBuilder, APIs, Windows Task Scheduler, Quickbase, AI tools, Oracle SQL Developer
Visualization & Reporting: ArcGIS Dashboards, Experience Builder, web apps, map reports, PowerPoint
GIS & Platforms: ArcGIS Pro, ArcGIS Online/Enterprise, ArcSDE, QGIS, AutoCAD
Raster & Vector Data: LiDAR processing and classification, raster datasets, custom basemaps (raster and vector), feature services
