- Jefferson Township Boundary

Additional Notes

A one-mile buffer was used in this analysis to capture any addresses located within the radius. It is important to note that this analysis only shows the total number of addresses, if there was a residential high-rise only one address was counted. There are a number of darker clustered areas in this township due to the fact that there are a large number of residential homes which take up less parcel space. All the census and hydrologic data for this analysis is sourced from the Cook County GIS Hub.
